

**PROCEED™ Metallic Mediums** are iridescent mediums that express a range of old elegance to contemporary opulence and fun through a vibrantly rich open palette of shimmering color.

PROCEED™ Metallic Mediums are available in Pearl, Gold, Copper, and Bronze and are formulated with 100% acrylic polymers and are compatible with most waterborne products. However, test mixes and sample boards should always be employed to ensure compatibility and performance.

**DO NOT USE with solvent-based materials.**

## **PROCEED™ Metallic Mediums**

### **PRODUCT APPLICATION**

**PROCEED™ Metallic Mediums** are acrylic mediums highly pigmented with iridescent mica pigments to produce a strong metallic effect.

Because mica pigments are translucent in nature, Metallic Mediums are translucent. When tinted, opacity increases depending upon the color and level of metallic effect desired.

Stir well before using. Some metallic “swirl” noted on the surface of the wet material is normal. Use undiluted to produce strong metallic effects. Apply with roller or brush in irregular sections, then tool to the desired appearance maintaining a wet edge when working sections together. If finishing with a roller, keep the roller saturated with material and apply in rectangular sections. When working one section into the next, strike off the first section while wet to orient the mica flakes. Maintain a wet edge when working sections together.

Gloss may be lowered to a matte finish by addition of 10% - 15% of PROCEED™ Matting Additive. However, the metallic luster will be diminished.

Let dry 12 - 24 hours before over coating with other PROCEED™ products. Full cure is developed in 2 - 4 weeks.

### **TINTING:**

Tint with **PROCEED™ Pigment Dispersions** or **PROCEED™ Slow-Drying Fluids** if a weaker tint is desired, mixing thoroughly before use. Use high transparency pigments to maximize the metallic luster of the final finish. High-hiding pigments will result in greater opacity, but will mute the metallic effect. The Metallic Mediums may be blended in any ratio. However, do not add more than 10% dispersion or Slow-Drying Fluid in combination by volume. Use of more than recommended percentage could cause a change in application characteristics or (in the case of dispersions) water sensitivity in the dried finish. Always test tint ratio for desired color before use.

**CAUTION: Tinting Metallic Mediums with aluminum or bronze powders is not recommended as it may cause out-gassing and rupturing of tightly sealed containers.**

PROCEED™ Metallic Mediums are available in Pearl, Gold, Copper, and Bronze and are formulated with 100% acrylic polymers and are compatible with most waterborne products. However, test mixes and sample boards should always be employed to ensure compatibility and performance.

**DO NOT USE with solvent-based materials.**

## **PROCEED™ Metallic Mediums**

### **PRODUCT APPLICATION CONTINUED**

Metallic Mediums may be blended with PROCEED™ Textures up to 10% by volume to introduce a subtle metallic highlight or luster to the finish. This technique works best with the most translucent textures: Rough Regular, Smooth Translucent, and the Smooth Transparent Trowelable Glaze.

#### **ADDITIONAL INFORMATION:**

Always use safe work practices. Avoid ingestion, excessive skin contact, and inhalation of concentrated vapors and sanding dusts. Clean tools with soap and water.

**Store between 50 and 80 degrees Fahrenheit. DO NOT FREEZE. If frozen repeatedly, the product may become unusable.**
